Programming Practice Questions:

1. Write a Python program to print all permutations of a given string (including duplicates).

Sample Input (String)	Expected Output (Permutations)
'ABC'	ABC, ACB, BAC, BCA, CAB, CBA
'AB'	AB, BA
'A'	A
'AAB'	AAB, ABA, AAB, ABA, BAA, BAA (with duplicates due to repeating characters)
'' (empty string)	(No output, as there are no permutations of an empty string)
